

When and Where

Date: March 3, 2015

Start: 6:15PM

End: 7:00PM

Room: Firehouse Grill

Role

Primary Facilitator: Alex Sears

Timekeeper: Tyler Blatt

Minute Taker: Alex Sears

Attending: Alex Sears, Tyler Blatt

1. Objective

Map out the database and design the API.

2. Status

All parts of iteration 1 are completed. Today was the day we presented before class.

3. Discussion

3.1 The database will be a simple database. There will be around five tables. Luckily, Rails will be able to handle all the migrations to make the database easier to create.

3.2 The API will not be very complicated. It will be a RESTful API with two main resources and multiple nested resources.

4. Wrap Up

Tyler will work on the database and API development. Alex will work on the front-end application. The front-end will be developed to interact with the back-end using the API design discussed during this meeting.
