

When and Where

Date: February 26, 2015

Start: 12:00PM

End: 12:45PM

Room: GH 375

Role

Primary Facilitator: Alex Sears

Timekeeper: Olga Maneylova

Minute Taker: Drew Hearing

Attending: Alex Sears, Tyler Blatt, Drew Hearing,
Judson August, Olga Maneylova

1. Objective

Go over the status of the project and the accompanying documentation for iteration 1.

2. Status

All authorization parts are finished. This means four of our use cases are complete: register, login, edit account, and delete account. The documents have been started but have not been finished.

3. Discussion

3.1 All documents are under way. There was some discussion about how different parts of the application will work. This is so the documentation is as accurate as possible.

3.2 The tests are under way. They just need a little tweaking and will be finished.

3.3 The project needs to be put up on a server. This will allow us to demonstrate the application to the class and also let the rest of the team play with it as we build it.

4. Wrap Up

Things are moving forward smoothly. Once we get the application on a server, we will be able to test things better. It will also allow us to make sure things work in a production environment as well as a development environment. Also, getting the tests completed will allow us to move forward more quickly.
